

OP16 PRE-RELEASE SEALED COMPLETE VISUAL HANDBOOK

Prepared for: Hamandtis aka "Praying Mantis"

Tournament-ready edition: deck construction plan, 2K counter simulator, what-if decisions, card ratings, leader images, and printable worksheets.

Highest Win % Rules	Praying Mantis Action
Consistency first	Build the smoothest 40 cards, not the flashiest 40 cards.
Removal and blockers	Prioritize ways to answer threats and survive pressure.
2K counter target	Default 10-12. If you opened 15, start at 11 and adjust.
Curve discipline	Too many 7+ cards loses before bombs matter.
Clean tournament play	Ask judges, communicate clearly, avoid tilt.

Source note: card images are official sample images where available. Strategy ratings are sealed-format coaching ratings, not market-price rankings.

1. Must Do - Highest Impact

- Sort immediately: bombs, removal, blockers, 2K counters, efficient bodies, filler.
- Build for curve and consistency before rarity.
- Identify your win condition before Round 1: tempo, board control, midrange value, or bomb finisher.
- Keep removal for cards that actually matter. Do not waste premium answers on weak bodies.
- Mulligan hands with no early board plan.

2. First 30 Minutes Deck Construction

Time	Action	Goal
0-5	Sort by cost, color, role, and counter value	See your pool quickly
5-10	Mark bombs/removal/blockers/2Ks	Find auto-includes
10-15	Pick leader and main plan	Avoid random pile deck
15-20	Build curve	Prevent slow hands
20-25	Cut weakest cards	Reach 40 with purpose
25-30	Goldfish 3 opening hands	Fix awkward curve before Round 1

3. Ideal Deck Shape

Role	Target	Notes
2K counters	10-12	If opened 15, usually play 10-12; start at 11.
Blockers	5-7	More if your local field is aggressive.
Removal	4-6	Hard removal is premium. Conditional removal depends on targets.
Early bodies	8-10	You need plays before turn 4.
Mid threats	5-7	Sealed games are often won here.
Finishers	3-5	Do not overload with 7+ cost cards.

4. 2K Counter Masterclass

Default answer: Play 10-12 2K counters in most 40-card sealed decks. If you opened 15, do not play all 15 automatically. Start with 11, then adjust by pool quality.

Scenario	Run	What if / adjustment
Opened 15 total 2Ks	10-12	Auto-lock best 9. Add 10th/11th. Add 12th if playable body or you need defense. Cut 13-15 first.
Weak removal	11-13	You need more hand defense because you cannot answer threats cleanly.
5+ strong removal	9-11	Removal already protects you, so excessive counters can reduce pressure.
Aggro/tempo build	8-10	You need attackers. Too many counters slows your clock.
Midrange build	10-12	Best default: defend early, win with bigger midgame cards.
Control/defensive build	11-13	Only if your late game is strong enough to reward survival.
Bad 2K bodies/effects	8-10	Defense-only cards weaken board development.
Good 2K bodies/effects	11-13	Playable 2Ks are premium because they work in hand and on board.

Praying Mantis Rule: For the 12th-15th 2K, ask: "Would I rather draw this on turn 5 or a real threat?" If the answer is real threat, cut the extra counter.

5. Best Card Types to Look For - Sealed Rating Matrix

Rating	Type	Include?	What if
10/10	Hard removal	Yes	Play almost always. Only cut if timing/cost is truly unplayable.
10/10	Bomb that wins unanswered	Yes	Build game plan around protecting it.
9/10	Good blocker	Usually	Upgrade if opponents are aggressive.
9/10	Playable 2K counter	Usually	Target 10-12 total; do not play all 15 blindly.
8/10	Efficient 5-6 cost threat	Yes if curve allows	Great sealed finisher range. Avoid too many 7+ cards.
8/10	Card advantage/draw	Usually	Better if it also affects board or has counter value.
7/10	Efficient vanilla body	Often	Good stats matter in sealed.
6/10	Conditional removal	Maybe	Upgrade if condition is easy; downgrade if narrow.
5/10	Synergy-only card	Maybe	Only play if support count is real.
1-3/10	Win-more / dead expensive card	No	Cut unless it is your only finisher.

Cut order when over 40: narrow combo cards -> expensive no-impact cards -> weak events -> bad bodies -> extra 2Ks above 12 -> extra finishers.

6. OP16 Leaders - Visual Quick Guide

Leader choice matters less than card quality in sealed, but if your pool strongly supports one leader, take the free synergy.

 Portgas.D.Ace Whitebeard Pirates OP16-001 Activate: Main Once Per Turn Up to 1 of your [Monkey.D.Luffy] Characters or up to 1 of your Characters with a type including "Whitebeard Pirates", with 8000 power or more, gains Push during this turn.	 Monkey.D.Luffy Impel Down/Straw Hat Crew OP16-022 Activate: Main Once Per Turn If the only Characters on your field are [Impel Down] type Characters, set up to 2 of your DON!! cards as active.	 Buggy Impel Down/Buggy Pirates OP16-041 DON!! Once Per Turn This effect can be activated when your [Impel Down] type Character card is removed from the field. Play up to 1 [Prisoner of Impel Down] card from your hand.
Portgas.D.Ace OP16-001 Aggro/pressure leader. Upgrade Whitebeard Pirates and 8000-power packages.	Monkey.D.Luffy OP16-022 Impel Down tempo. Best when your pool has enough Impel Down bodies.	Buggy OP16-041 Board flood leader. Good if your pool makes many small bodies.
 Sengoku Navy OP16-060 Activate: Main You may return 8 of your active DON!! cards to your DON!! deck; Play up to 3 [Admiral] type Character cards with different card names from your hand.	 Yamato Land of Wano OP16-079 When a [Land of Wano] type Character card is played from your trash, that Character gains Push during this turn. (This card can attack on the turn in which it is played.)	 Marshall.D.Teach The Seven Warlords of the Sea/Blackbeard Pirates OP16-080 Opponent's Turn All of your Characters gain +1 cost. On Your Opponent's Attack Once Per Turn You may trash 1 card with a Trigger from your hand; Change the target of that attack to this Leader or to one of your [Blackbeard Pirates] type Character cards.
Sengoku OP16-060 Navy/admiral ramp. Powerful but wants the right Navy density.	Yamato OP16-079 Trash/rush plan. Needs support; can punish slow sealed decks.	Marshall.D.Teach OP16-080 Defensive manipulation. Upgrade trigger cards and Blackbeard Pirates.

7. Best Cards to Look For - Visual Rated Watchlist

These are high-priority sample cards from official OP16 images. Use the rating logic: bombs, removal, blockers, 2K value, and board impact. Do not force synergy if your sealed pool does not support it.

Edward.Newgate
OP16-003 SR
Sealed rating: 10/10
Role: Auto-include bomb
What if: Play if opened. Build around 8000-power support only if your pool has enough; still strong as a finisher.

Monkey.D.Luffy
OP16-015 SR
Sealed rating: 9.5/10
Role: Premium defensive threat
What if: Better with Ace/8000-power package. If unsupported, still consider due defensive pressure and 6000 body.

Boa Hancock
OP16-032 SR
Sealed rating: 9/10
Role: Unblockable finisher
What if: Great when games stall. If curve is already heavy, keep as one of few top-end threats.

Portgas.D.Ace
OP16-118 SEC
Sealed rating: 9/10
Role: Value engine / 2K boost plan
What if: Excellent if you have many 8000-power characters. If not, evaluate as a 5-cost 6000 with search/value upside.

Best Cards to Look For - continued

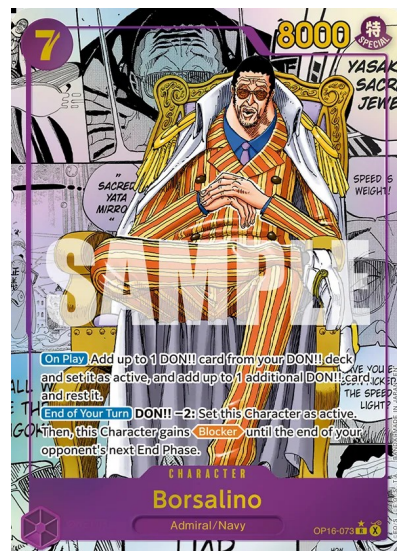

Sakazuki

OP16-065 SR

Sealed rating: 9/10

Role: Huge tempo swing

What if: Best with Navy/Purple support, but -6000 power is relevant even in sealed when it enables clean attacks/removal.

Borsalino

OP16-073 R

Sealed rating: 8.5/10

Role: Threat plus blocker role

What if: Strong if you can afford 7-costs. Do not overload with too many 7+ cards.

Best Cards to Look For - continued

Kuzan

OP16-063 R

Sealed rating: 8/10

Role: DON ramp and anti-blocker pressure

What if: Good in slower pools. Downgrade if your deck already has too much top-end or too little early defense.

8. Mulligan and Gameplay Flowchart

Question	If YES	If NO
Do I have an early play?	Keep evaluating	Strong mulligan signal
Do I have defense/counter?	Good	Risky against tempo
Do I have midgame pressure?	Keep if curve works	Mulligan if hand does nothing
Can I explain how this hand wins?	Keep more often	Mulligan more often

9. Round-by-Round Tournament Plan

Stage	Plan
Before Round 1	Review deck shape: 10-12 2Ks, 5-7 blockers, 4-6 removal, 3-5 finishers.
Round 1	Gather information. Read cards. Avoid assumptions.
Rounds 2-3	Adapt legal sideboard choices. Cut dead cards. Add answers.
Final rounds	Slow down. Count DON!!, blockers, counter math, and lethal lines twice.

10. Praying Mantis Final Checklist

- Sleeves ready and legal.
- Deck is exactly 40 cards.
- 10 DON!! ready.
- Best 9 2Ks locked; 10th-12th chosen carefully.
- Removal count checked.
- Curve checked by cost.
- Win condition written in one sentence.
- Stay calm. Win through discipline, not luck.

Live Pool Worksheet

Use this after opening packs.

Item	Count / Notes
Bombs opened	
Hard removal	
Conditional removal	
2K counters total opened	
2K counters chosen for deck	
Blockers	
Finishers 6+	
Leader chosen	
Cards cut last	
Round notes	

Tournament Creed: Build for consistency. Value removal. Respect blockers. Pressure efficiently. Stay calm under pressure. Win through discipline, not luck.
